

Election Report: Chile 2025

First Round

Tresquintos

September 2025

Report intended exclusively for clients; not for public distribution

Average support per Candidate (in Days)

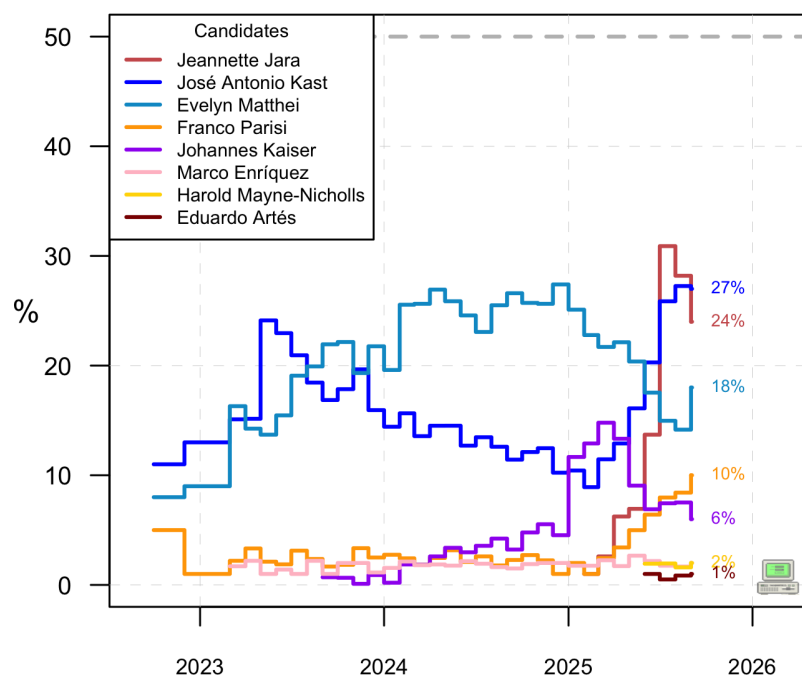

Candidate/Days	15	30	45
Jeannette Jara	27.5	27.7	28.7
José Antonio Kast	25.8	27.4	27.5
Evelyn Matthei	14.1	14.3	14.3
Franco Parisi	8.6	8.4	8.6
Johannes Kaiser	7.5	7.5	7.7
Marco Enríquez	2.2	1.8	1.6
Harold Mayne-Nicholls	1.7	1.7	1.6
Eduardo Artés	0.9	0.9	0.9

Note. Values under 'Days' indicate average candidate support in the last 15, 30, and 45 days respectively. These are based on available polls and are not forecasts.

Key Insights

- Jeannette Jara is losing support (1st place), down 0.6 points in the last 30 days (-0.2 pts in the last 15 days, -1 in the prior).
- Over the past month, José Antonio Kast has shed support (2nd place), with a reduction of -1.6 points in the last two weeks and -0.1 in the two weeks before that.
- Evelyn Matthei has held steady (3rd place), posting negligible changes across both recent 15-day intervals: $+0.2$ and $+0$ points.
- Franco Parisi has held steady (4th place), posting negligible changes across both recent 15-day intervals: $+0.2$ and -0.2 points.
- Johannes Kaiser shows consistency in voter support (5th place), with only slight variation over the last 30 days: $+0$ pts and -0.2 pts respectively.
- Marco Enríquez shows consistency in voter support (6th place), with only slight variation over the last 30 days: $+0.4$ pts and $+0.2$ pts respectively.
- Harold Mayne-Nicholls has remained stable over the last month (7th place), with minimal change: $+0$ points in the past 15 days and $+0.1$ in the previous 15.
- Eduardo Artés shows consistency in voter support (8th place), with only slight variation over the last 30 days: $+0$ pts and $+0$ pts respectively.

First Round 2025

Jeannette Jara

Bio: Jeannette Jara (born 1974) is a Chilean politician and member of the Communist Party. She has served in various public roles, most notably as Minister of Labor under President Gabriel Boric. With a background in public administration and law, Jara is part of the progressive-left coalition and advocates for labor and social rights.. **Trends:** Since 2022, Jeannette Jara has shown up in 80 polls that have looked at presidential voting intention. The maximum reported is 39% and the minimum is 1%. The average is about 18.6%. Current support is estimated at about 24%. The plot below shows the snapshot. The staircase line represents the monthly average. The shaded region represents the margin of error. The estimated daily variation over the observed period is 0.19%. Methods

This section details the methodology used in this analysis, covering data sources, transformations, statistical models, and visualization techniques. **Data Sources:** Polling data was gathered from leading pollsters including Cadem, Criteria, Plaza Pública, Data Influye, Activa Research, Feedback, and Ipsos, selected for their data availability, sampling techniques, and internal consistency. Including these varied pollsters ensures a comprehensive view of public opinion across different sampling methods and population representations. The candidates analyzed include: Jeannette Jara, José Antonio Kast, Evelyn Matthei, Franco Parisi, Johannes Kaiser, Marco Enríquez, Harold Mayne-Nicholls, Eduardo Artés . **Data Transformation and Filtering:** Following collection, the data underwent rigorous cleaning and standardization. Dates were processed using the lubridate package and converted into year-week or year-month intervals, supporting accurate and consistent aggregation over time. Missing values (NAs) were removed, and candidate-specific averages were calculated, ensuring valid comparisons and reliable trend lines. **Trend Line Methodologies:** The staircase line represents a monthly average of each candidate's support, displayed as to emphasize abrupt shifts or drops in short-term support. The shaded region around the lines represents the margin of error. It is given by a Loess smoothed trend (`loess.sd()`), which is used to capture nonlinear fluctuations and patterns that may not be captured by the simple linear trend. This smoothing model uses a span of 0.66 to balance between fit accuracy and over-smoothing. It offers a 90% prediction interval, reflecting possible future variability. **Statistics:** Statistical labels display each candidate's mean support, standard deviation, and observed support range (minimum and maximum values), giving additional insight into the relative stability or variability of public opinion for each candidate; `beta` symbolizes the variation over a day. `r2` represents the equation fit. `n` represents the number of polls. `mu` represents the average over the whole period of polls fielded. `sigma` represents the standard deviation. `max` represents the maximum polling percentage and `min` represents the minimum polling intention. **Visualization:** Graphs are generated using `ggplot2` and base R graphics, with candidate trends color-coded for clarity. **Disclaimer:** The report is based on recent polling data, recognizing that public opinion is dynamic and may continue to shift.

Tresquintos
Santiago, Chile
